

Automatic lighting control device

FIELDS OF APPLICATION:

The device provides automatic energy-saving lighting control for:

- residential and community buildings
- industrial enterprises

MAIN FEATURES AND BENEFITS:

- energy saving due to changing the operation mode of lighting units
- easy to adapt for local conditions
- low power consumption
- multi-channel operation
- software control of operating modes
- increased durability of lighting units

STRUCTURE:

- detector
- control system (based on a microcontroller)
- power supply module

The device has successfully passed a test
in the lighting system of a 9-storey house with 4 entrances in Chernihiv.
